## EDUCATION

### Georgia Institute of Technology

January 2022 - December 2023 (Expected)

*Master of Science in Computer Science*

*Atlanta, GA*

- **Relevant Coursework:** Knowledge-Based AI

### University of New Orleans

August 2019 - December 2021

*Bachelor of Science in Computer Science – GPA: 3.99/4.00*

*New Orleans, LA*

- **Leadership:** Google Developers Student Club (DSC Lead), Toastmasters (President), SGA (Senator)
- **Relevant Coursework:** Data Structures and Algorithms, Algorithm Analysis, Python for DS & AI, Database Management Systems, Cloud Computing, Computer Networks, Operating Systems, Software Design I & II (Java)

## SKILLS

<b>Languages</b>	Java, Python, HTML/CSS, JavaScript, SQL
<b>Technologies</b>	Git, Unity, Jupyter Notebook
<b>Libraries</b>	NumPy, Pandas, Matplotlib, scikit-learn
<b>DevOps</b>	Amazon Web Services (AWS), Terraform, GitLab CI/CD
<b>Certifications</b>	AWS Solutions Architect - Associate, AWS Cloud Practitioner

## EXPERIENCE

### Incoming Software Engineer Intern

May 2022 - August 2022

*PayPal*

*Austin, TX*

- Joining Venmo (PayPal) for an exciting, enriching, and character-building experience this upcoming summer!

### Software Engineer Intern (DevOps)

May 2021 - July 2021

*USAA*

*Plano, TX*

- Reduced cluttering by 84% and allowed for easier feature-based auditing of a qTest archive by innovating a new directory structure for publishing automated infrastructure test results that affected 70 projects.
- Enabled automatic AWS resource tagging on one parameter if not provided by a developer or optional manual tagging otherwise by modifying a custom Terraform provider utilized by 55 projects using GoLang.
- Decreased the cost of conducting network connectivity testing on EC2 instances by 92.38% by developing a selection of 5 AWS Systems Manager (SSM) testing automations using Terraform and GitLab CI/CD.

### Undergraduate Research Assistant

January 2021 - May 2021

*University of New Orleans*

*New Orleans, LA*

- Developed immersive eXtended Reality (XR) games using Unity and C# under advisement of Dr. Farjana Eishita to discreetly detect 8 types of cognitive distortions and other mental health conditions.
- Converted 42 scenes of an existing cognitive distortion detection game from Augmented Reality (AR) to Mixed and Virtual Reality (MR & VR) for player-experience comparisons.
- Conducted player-experience testing on 9 individuals to identify bugs and ensure effective game-play engagement.

## PROJECTS

### Stock Simple Moving Average Pipeline | AWS, Python

- Developed an AWS cloud-based pipeline that computes the simple moving average of one of the four OHLC-type stock prices from a CSV input file of stock data.
- Created the cloud infrastructure using the AWS Python SDK (Boto3) by automatically initializing and connecting two S3 buckets, two Lambda functions, one SNS topic, and one DynamoDB NoSQL database table.
- Computed the aggregate simple moving average automatically, decreasing the time it takes to acquire this information from each input file by 99.97% compared to manual calculation.

### Warframe Inventory Market Info | Python

- Developed a program that gathers 4 different attributes about users' in-game Warframe inventory items, decreasing the time it takes to gather relevant data by 98.67% per item page compared to manual calculation.
- Generated a names-list of 358 types of items automatically using OpenCV to isolate item names from the inventory-screen image by thresholding the text colors, and using PyTesseract to read the remaining text.
- Collected the average platinum price of the 10 current cheapest live web market value sell-orders by utilizing the warframe.market API for each item in the generated names-list.
